NOTICE OF DATA BREACH

Dear *****,

Important Notice Regarding Your Information

We are writing to notify you of a potential incident involving your protected health information.

Firstsource Healthplans and Healthcare Services, LLC (“Firstsource”), a service provider to health insurance industry clients, recently identified a programming error on its platform that may have allowed unauthorized access to or viewing of certain personally identifiable information. Firstsource received your information in connection with client engagements, including data related to your health care through your health benefit plan. The platform supports online uploads of documents, including claims and correspondence, on behalf of providers and members to enable downstream data intake and processing.

What Happened

While the platform was active from July 16, 2025, through January 15, 2026, Firstsource was notified on May 18, 2026, that a programming issue may have resulted in a potential exposure of information within the platform. Following a detailed investigation, we determined that unauthorized individual(s) could have viewed information however, there is no evidence that any information was misused. While there is no evidence of such, based on our risk assessment, we are providing this notice out of an abundance of caution.

What Information Was Involved

Again, at this time, we have no evidence that any information was misused by an unauthorized person. However, the potential exposure included your stand-alone Social Security number.

What Are We Doing

When we discovered this issue, we took immediate steps to secure the affected platform. We disabled the setting that allowed this information to be accessed and added additional protections to the related system. We have also strengthened access controls consistent with security best practices.

Additional Steps We Took to Better Protect Your Information

- We updated the system to better control how files and information can be accessed.
- We added additional safeguards to block attempts to reach information through unauthorized paths.
- We changed the way the application handles file access so it can only occur through approved processes.
- We strengthened checks on the system to help ensure only authorized users can make requests.
- We improved security for system connections and application features to better protect against unauthorized access.
- We enhanced session controls, including automatic expiration and sign-out protections.
- We added stronger checks throughout the application to help prevent unauthorized access to information.

- We changed passwords, security keys, and other credentials connected to the affected application.
- We strengthened protections for sensitive information, including when it is stored and when it is transmitted.
- We added stronger user verification steps for certain file access functions.

In addition, we engaged an independent forensic firm to review the security of the platform. Based on that investigation, there is no evidence that your information was misused.
